Introducing the Extreme Smart Room makeover.

For hotels on the leading edge of luxury and Guest services the IntraLAN SmartRoom Network ULTRA by Panoptic Technology offers the ultimate solution for enabling every Smart Room technology both today and in the future.

The **IntraLAN SmartRoom Network ULTRA** system provides the most advanced SmartRoom Network option – enabling the “plug and play” inclusion of any vendor’s Smart Room technology, device, or component. The ULTRA solution is designed to provide a integration of all the advanced hotel Smart Room admendities into one comprehensive management and control network.

With a variety of RND (Remote Network Devices) to house smart room technologies and applications, the ULTRA system provides a secure location within the guestroom to locate critical devices, connect to the existing cat5 or fiber optics networks, segegrate and distribute network data, house a local Zigbee transceiver and then provide conditioned and manageable 110V power to all Smart Room devices in the guest room.

ULTRA becomes whatever your vision of the smart room is.

IntraLAN SmartRoom Network ULTRA is not an off-the-shelf solution. Using IntraLAN technology and other innovations, it is a completely customized approach to configuring a smart room network however a client or integrator envisions. The smart room just doesn't get any smarter than this.
